What is Touhou Danmakufu?

Touhou Danmakufu is a scripting engine for Danmaku games. You can run it to play other peoples' scripts, or you can create your own. It comes with default graphics, but those can be replaced.

There are two different versions. 0.12m is the old version, #ScriptVersion[2], that is used for Concealed the Conclusion, Phantasm Romance, Phantasmagoria Trues, and the Last Comer, etc. ph3 is the new version constantly being developed by mkm that runs Fairies of Sorcery, Mythical Power Plant, and a good portion of the new scripts coming out.

How to CORRECTLY run Danmakufu without a crash

NOTE: ph3 [.1] should run fine - this section only applies to 0.12m (the old version) and ph3 [.0]

When you open Danmakufu 0.12m, it will usually crash. When you open Danmakufu ph3 (before [.1 pre2]), you won't be able to see any files. So what are you doing wrong?

Well, basically... you need to run Danmakufu in Japanese Locale. You will need to obtain AppLocale and install the East Asian Language packs. You will need to run all versions of Danmakufu in Japanese Locale. I recommend making a shortcut so that you can easily open it in Japanese Locale. After it is installed, then feel free to work with it. Please refer to this guide if you are having trouble: [AppLocale Installation Guide](#)

*I suggest NOT dumping Danmakufu in Program Files or some other place. Put it somewhere where it is easily accessible.

PLEASE READ **BEFORE** DOWNLOADING SCRIPTS

-When I say "Comes with everything," the game is ready to be played off the bat. Do not mess around with the files. Just open th_dnh.exe (for 0.12m, in Japanese Locale) and you should be fine.

-When I say "Does not come with Danmakufu pre-packaged," you must manually place the scripts in their respective folders. Usually, it goes right into the script folder. Make sure that you are using the correct version of Danmakufu. For ph3, please use the latest version.

-For axcf downloads, please type in the captcha, select the button that says ダウンロード, then wait. If it gives you a confirmation captcha, then just do as asked. If it gives you リトライ, then click that button to retry.

-For ph3 games, you should NOT use the version of Touhou Danmakufu they provide for any other scripts. The reason is because of ph3's package system and due to the multiple versions of ph3.
